EDUCATION

Northeastern University, Boston, MA

M.S. in Software Engineering Systems

Expected Dec 2026

Dickinson College, Carlisle, PA

B.S. in Computer Science and B.S. in Quantitative Economics

May 2024

TECHNICAL SKILLS

Languages: Python, TypeScript, Java, SQL

Web and APIs: React, FastAPI, REST APIs, Playwright, PostgreSQL, SQLAlchemy

Infrastructure and AI: AWS, GCP, Docker, CI/CD, LLM Systems, RAG, NLP, OpenAI APIs, vLLM

EXPERIENCE

Research Assistant, Northeastern University - Boston, MA

May 2026 - Present

- Architected a full-stack experimentation platform for Generative Engine Optimization, connecting a React interface to scalable Python and FastAPI services for benchmark evaluation and recommendation analysis.
- Designed and implemented 47 REST APIs with PostgreSQL and OpenAI integrations to orchestrate experiment execution, evaluation workflows, and persistent results.
- Built browser-assisted workflows with Playwright for reusable session management, multi-platform publishing, and reliable content delivery.
- Implemented a benchmark-driven engine reproducing the Princeton GEO methodology with configurable strategies, experiment aggregation, and reproducible evaluation.

Software Engineer Intern, Software Velocity Corporation - Boston, MA

Sep 2025 - Jan 2026

- Built a unified evaluation platform for 10+ language models across cloud GPU environments and external APIs, supporting reliable comparison of latency, throughput, and cost.
- Developed experiment tracking with model, configuration, GPU, and prompt-set metadata, improving reproducibility and auditability across multi-person engineering workflows.
- Orchestrated concurrent inference workloads, identified system bottlenecks, and improved end-to-end pipeline efficiency by 25-40%.
- Automated cloud deployment and execution workflows, reducing setup time and increasing the reliability of large-scale testing.

Research Assistant, Dickinson College - Carlisle, PA

Sep 2023 - Jul 2024

- Built Python NLP and data-processing pipelines for 300K+ documents and 100M+ data points, producing structured corpora for downstream analysis and modeling.
- Developed reusable querying and visualization components that accelerated iterative analysis of high-dimensional text data.
- Designed structured corpus-generation workflows that supported repeatable downstream NLP analysis and model-driven insights.

PROJECT

Account Lifecycle Management Platform

May 2026 - Present

- Developed a web-based account lifecycle platform with provider-based orchestration, persistent browser sessions, campaign scheduling, and 49 REST APIs.
- Designed modular workflow abstractions with health monitoring and recommendation services to keep integrations maintainable and extensible.
- Implemented scheduling and provider-specific workflow components around persistent sessions for dependable multi-platform execution.
